1 The-Swift-Programming-Language-in-Chinese

The Chinese Translation of [The Swift Programming Language](#).

Created using [pandoc](#) and [Markdown](#).

1.1 Usage:

```
build.py [pdf|html|epub|beamer]
```

directory for output:

```
output - beamer
        - pdf
        - epub
        - html
        - pic
```

the default value of build.py is html. It will use default.html as a template and turn all markdown files in root dir into html in output dir. Then you can preview it in your browser.

Pdf/beamer tranformation needs Latex (actual Xetex). TexLive is suggested.

Tested under Ubuntu and Windows7.

1.2 Markdown Grammar

see [this](#) for refrence.

1.3 Tools

- [pandoc](#)
- [sublime](#)
- [vim](#)
